Green Waste RECYCLING

HOW IT WORKS!

STEP 1: Collection & Drop-Off

The majority of our green waste is collected curbside and is unloaded at our composting facility located at the Salt Lake Valley Landfill.

STEP 2: Grinding & Composting

The green waste is then shredded and laid out in rows called windrows for at least 12 weeks. Windrows reach a temperature of at least 132°, killing pathogens and weed seeds.

STEP 3: Screening

After the windrow process is complete, the finished compost is processed through a trommel screen and sold to the public.

DID YOU KNOW?

In 2018, 21,443 tons of green waste were diverted from the landfill!

YES!

Vegetables*

Fruits*

Egg Shells

Coffee Grounds & Tea Bags

Lawn Clippings & Weeds

Tree Branches & Leaves

All items should be placed in the green waste can **UNBAGGED** without produce stickers.

**Raw veggies & fruits (whole and scrap) accepted. Remove any produce stickers.*

By composting our organic material, we can save up to 25% of our landfill space!

NO!

- Plastic Bags
- Glass
- Meats / Dairy
- Paper Products
- Construction
- Wood/Sawdust
- Garbage
- Animal Waste
- Biodegradable/Compostable Packaging
- Sod & Dirt
- Rocks

Our compost has a 2% contamination rate by volume. Our goal is to produce the highest quality compost, which means eliminating contamination. Thanks for your help!

50% of the contamination we encounter in our green waste comes from glass & plastic! For more info on recycling please visit slco.org/recycle
