Figure 1

Pertussis Five Season Comparison Salt Lake County, 2014-2018 YTD

*Population data from IBIS-PH: <http://ibis.health.utah.gov>

When compared to the five-year average, 2018 pertussis cases follow a different seasonal trend. See figure 2.

Figure 2

The highest rate for pertussis is in the <1 year of age group, with a rate of 34 per 100,000. See figure 3.

Figure 3

The highest rate for pertussis is among the White population at 11 per 100,000. (Rates for ethnicity show 9 per 100,000 among Hispanics and 12 per 100,000 among non-Hispanics). See figure 4.

Figure 4

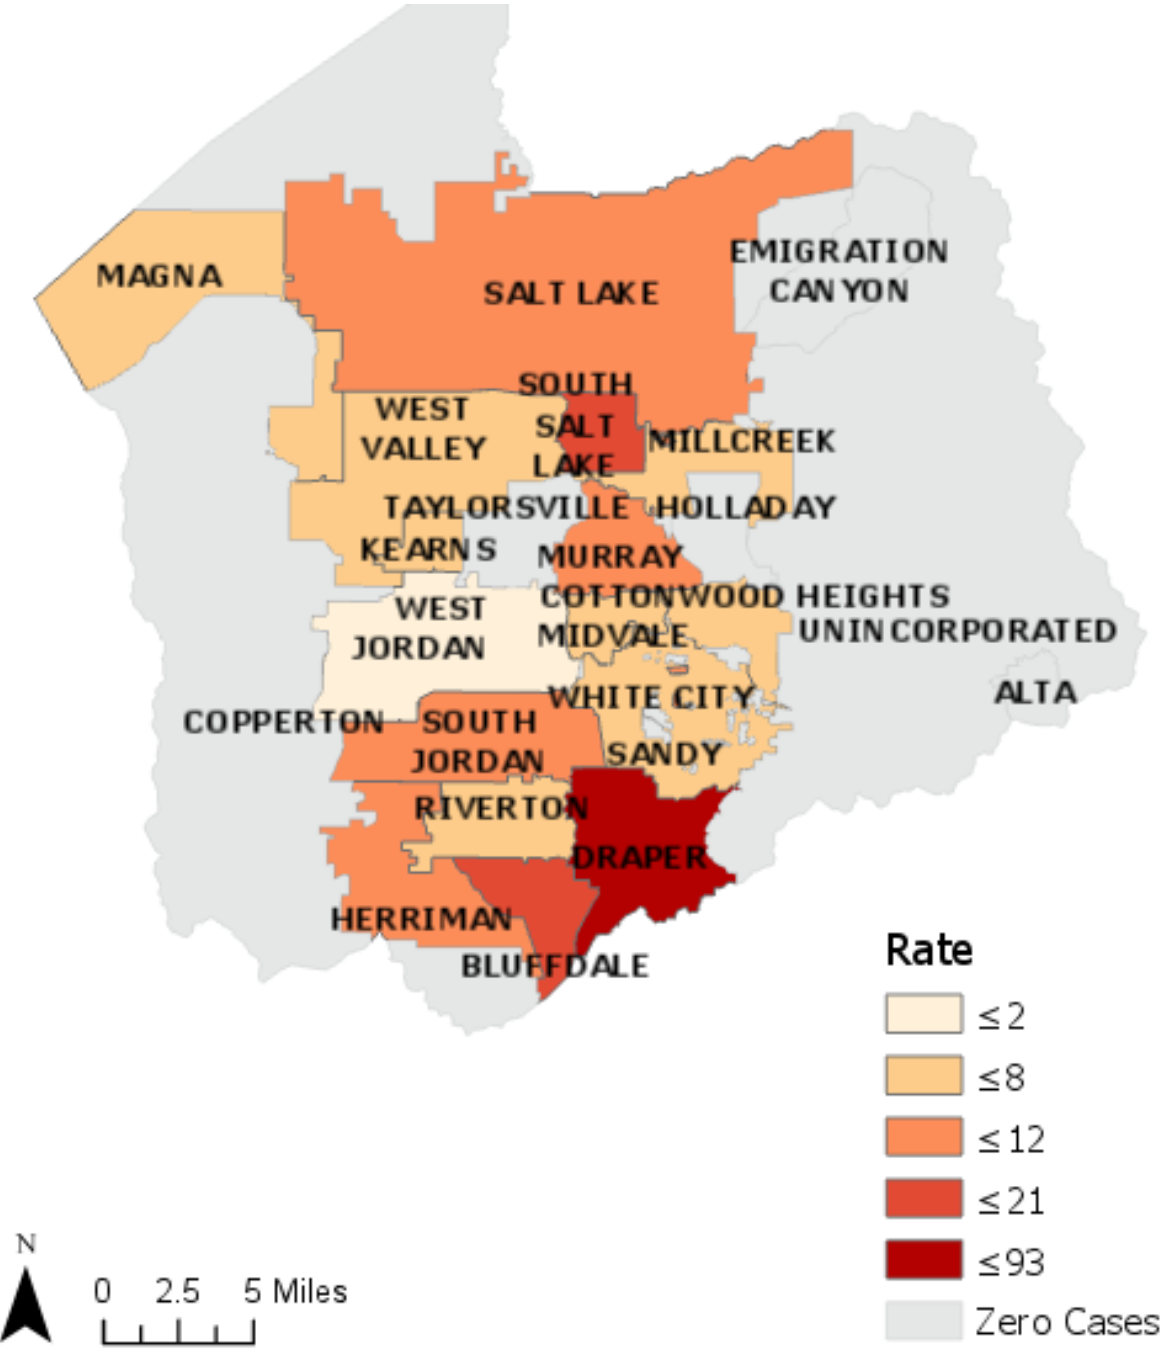

*Population data from IBIS-PH: <http://ibis.health.utah.gov>

Among the 130 pertussis cases, 117 have been vaccinated. Eighty-eight (75%) of the 117 cases reported having an up to date vaccination status. See figure 5.
