

- 69 cases year to date
- 0 hospitalizations
- 0 deaths

Figure 1

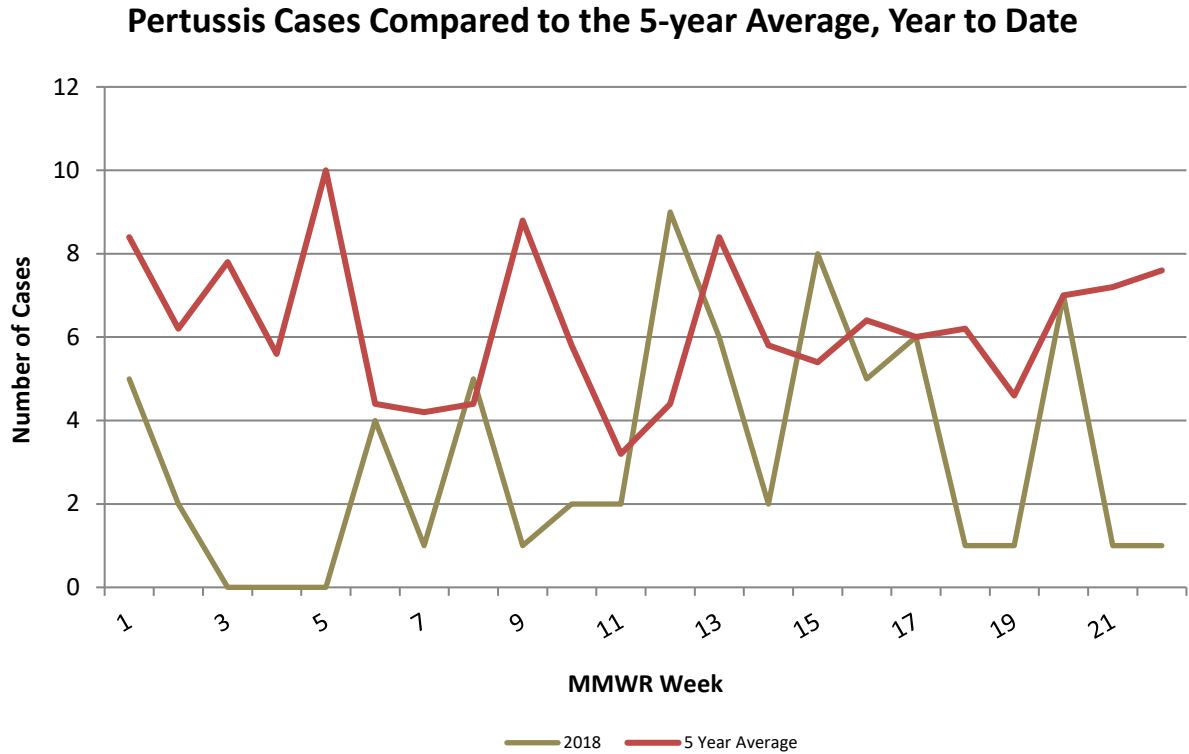

**Pertussis Five Season Comparison  
Salt Lake County, 2014-2018 YTD**

\*Population data from IBIS-PH: <http://ibis.health.utah.gov>

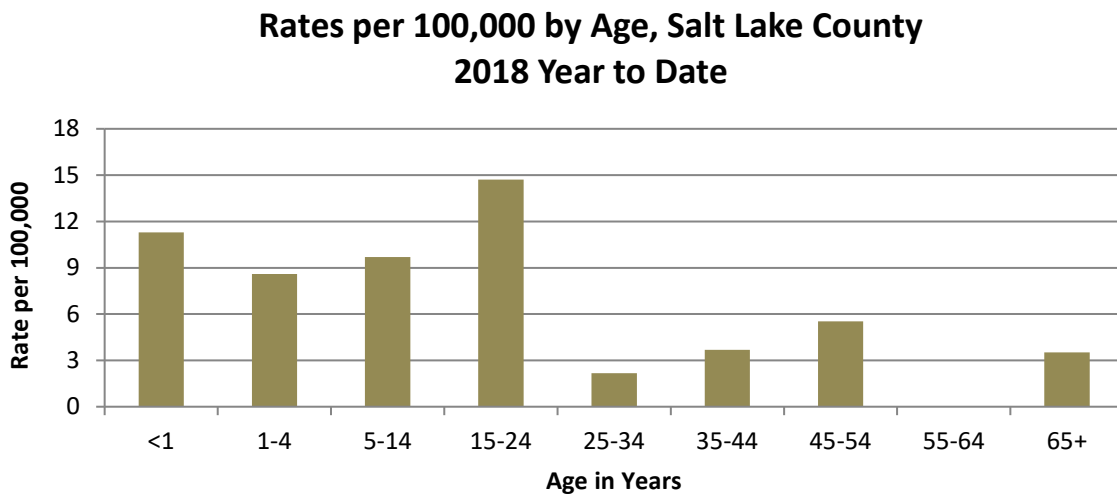

When compared to the five-year average, 2018 pertussis cases follow a different seasonal trend. See figure 2.

Figure 2

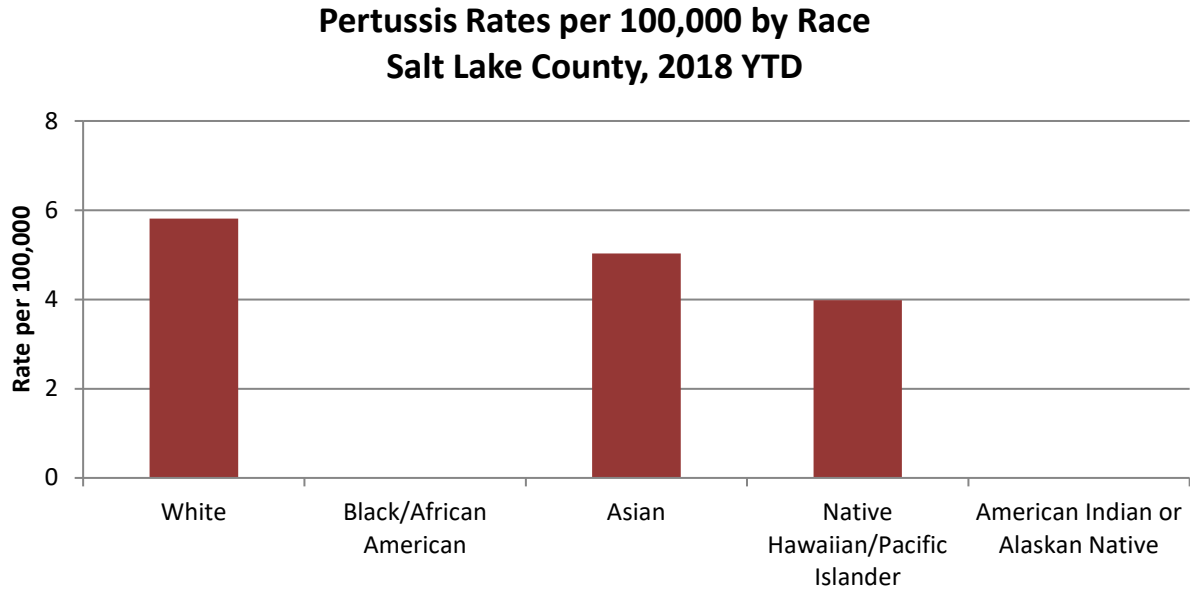

The highest rate for pertussis is in the 15-24 age group, with a rate of 15 per 100,000. See figure 3.

Figure 3

The highest rate for pertussis is among the White population at 6 per 100,000. (Rates for ethnicity show 5 per 100,000 among Hispanics and 6 per 100,000 among non-Hispanics). See figure 4.

Figure 4

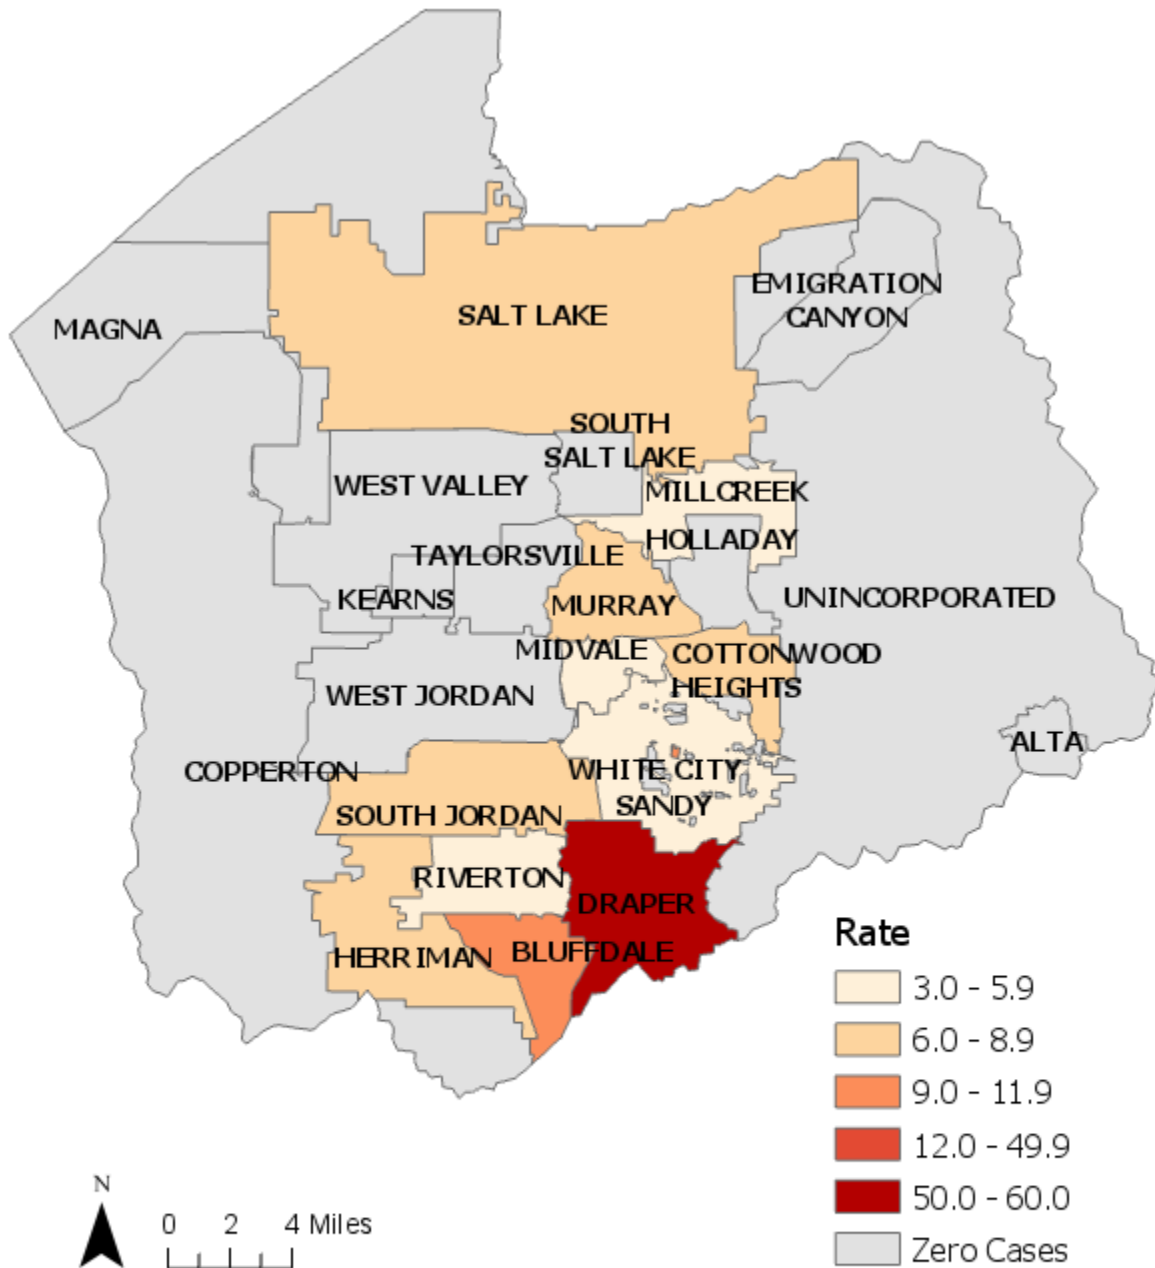

\*Population data from IBIS-PH: <http://ibis.health.utah.gov>

Among the 69 pertussis cases, 64 have been vaccinated. Forty-nine (77%) of the 64 cases reported having an up to date vaccination status. See figure 5.
