Green Waste Recycling

How it Works

Step 1: Collection and Drop-Off

The majority of our green waste is collected curbside and is unloaded at our composting facility located at the Salt Lake Valley Landfill.

Step 2: Shredding

The green waste is then shredded and laid out in rows called windrows for about 8 to 10 weeks. Windrows reach a temperature of at least 120 degrees, killing any weed seed.

Step 3: Screening

After the windrow process is complete, the compost is run through a Trommel Screen and the fine material is sold to the public.

Yes

Vegetables*

Fruits*

Egg Shells

Coffee Grounds and Tea Bags

Lawn Clippings and Weeds

Tree Branches and leaves

All items should be placed in the green waste can **UNBAGGED**.

*Whole and scraps, raw, remove produce sticker

No

- Plastic Bags
- Meats/Dairy
- Paper Products
- Construction/Wood/Sawdust
- Garbage
- Animal Waste
- Biodegradable/Compostable Packaging
- Sod and Dirt
- Rocks

Our compost has a 2% contamination rate by volume. In order to improve the quality of our product, our contamination rate needs improve.

Did you know?

In 2015, 43,742 tons of green waste were diverted from the landfill!

By recycling our organic material, we can save up to 25 percent of our landfill space!

50% of the contamination we encounter in our green waste comes from glass! For more information on glass recycling please visit SLCO.ORG/RECYCLE
