

SALT LAKE COUNTY GIS

Salt Lake County **G**eographic **I**nformation **S**ystem (GIS)

Salt Lake County has a decentralized **G**eographic **I**nformation **S**ystem (GIS). This means that the people who regularly create, use and analyze geographic data are spread in different organizations throughout the County. This also means that there is no one office that creates and maintains the data that was described in last week's article *GIS Resources*.

The GIS Steering Committee is the governing body for geographic information. This Committee has a web page that explains its role and function in more detail. <http://slcintranet.slcounty.org/gis/>

There is a GIS user's group for Salt Lake County employees, that meets the third Thursday of each month at 10:00 am in the large Information Services conference room S3019, South Building Government Center. This group works to share information, coordinate activities and provide mutual support to the GIS users within the County.

There is also an email discussion list that is used to communicate with the members of the Salt Lake County GIS community.

To be added to the invite list for the user's group or to be added to the contact list please contact Dale Burtch dburtch@slco.org , Ryan Sadler rsadler@slco.org , or Matt Borden mborden@slco.org .

STAY TUNED FOR MORE INFORMATION...

Throughout the coming year the members of the GIS community will be providing more information about GIS through econnect.
